ICS Workshop 2013

LandonLine and an Expanded Cadastre

(Presented by James Mowat – LINZ)

Landonline

Existing Landonline was written in Powerbuilder language, which is becoming outdated and harder to maintain.

LINZ have initiated a six-year project for the modernisation of Landonline using a new software language, with roll out scheduled for 2019.

The new version of Landonline is likely to be independent of users operating system.

Cadastre

LINZ are developing a business case for an expanded cadastre to include all land rights, using a portal to other land rights record holders databases (eg. TA's).

It was suggested from the members that rather than developing a three dimensional system as proposed, that any system would need to be four dimensional to take account of time.
