pilot the new Survey Capture and Plan Generation components with Landonline users that are likely to include ICS members.

The LINZ project team will only be approaching individuals that have previously indicated they are open and willing to be contacted by LINZ to engage in such activities. They will also offer to talk to the individual's manager if that is considered necessary.

STEP WORKING GROUP

The initial pilot of the new Landonline survey interface commenced in the middle of August. While there is quite a bit of functionality yet to be implemented and a few bugs to work out, the initial user experience is very positive. The new interface is based around the spatial/map window which is super responsive and readable. The interconnection between the map and the vector and mark lists is much better than legacy Landonline. Here is a teaser showing the appearance of the new user interface:

The development team also ported the new interface over to the new rules in time for August-30 which was a heroic effort. The inability to edit vector source values or add new vectors, marks or parcels is a policy-driven frustration which has been fed back to Toitū Te Whenua.

If you have any questions or feedback please contact Alex (alex@foxsurvey.co.nz).
